### POSITIONING THE LIGHT

When selecting the mounting position, take into account the following points:

1. The sensor is designed for optimum performance when mounted at a height of above 2.5 to 4 meters (see Figure )
2. Avoid pointing at or positioning close to heat sources such as heaters or heat extraction units, which may cause false triggering.
3. Avoid pointing at bright lights as the sensor will not function when you set Lux control level to dark.
4. Avoid mounting at strong electromagnetic disturbance, i.e. near electrical motor or fluorescent lamp ballast.

## INSTALLING THE LIGHT

Before commencing any electrical work, ensure the mains supply is isolated by switching off and removing the relevant fuse. (See Figure )

1. Remove the Glass Chimney
2. Use the back metal disk to mark the position of screw onto ceiling surface. Using a bit, drill the wall to a depth of about 3cm. Fit the rawl-plugs supplied.
3. Bring mains wiring through and fix back metal disk to ceiling surface using screws. Connect mains wiring to the terminal block.
4. Re-fit the Glass Chimney

After finishing the installation operation, you can adjust the working state of the MICROWAVE SENSOR

## TECHNICAL DETAILS:

Voltage:	220-240 V~ 50 Hz
Wattage:	40x0.5W LED
Detection range:	360° and Max.5meters radius (see Figure )
Delay time:	10s to 10 min. adjustable
Lux control level:	Daylight to Night adjustable
IP:	20
